Sequence 15. Application US/09118442B

Patent No. 6197561

GENERAL INFORMATION:

APPLICANT: Warrino-Catt, Susan J.

APPLICANT: Wang, Hongyu

APPLICANT: Beach, Larry R.

APPLICANT: Bowen, Benjamin A.

ITILE OF INVENTION: Benjamin A.

ITILE OF INVENTION: Plants and Uses Thereof

FILE REFERENCE: 0706

CURRENT APPLICATION NUMBER: US/09/118,442B

CURRENT PILING DATE: 1998-07-17

EARLIER APPLICATION NUMBER: 60/055,446

EARLIER APPLICATION NUMBER: 60/055,526

EARLIER APPLICATION NUMBER: 60/055,526

EARLIER APPLICATION NUMBER: 60/053,944

EARLIER APPLICATION NUMBER: 60/053,944

   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        B B

| _length http://www.genoscope.cns.fr/cgi-bin/ggb/ggb?source=Arabidopsis. FEATURES Location/Qualifiers source 11828 /organism="Arabidopsis thaliana" /mol_type="mRNA" /strain="Col-0" | Whole Genome Sequence Comparisons and 'Full-Length' cDNA Sequences:  A Combined Approach to Evaluate and Improve Arabidopsis Genome Annotation Unpublished Anotation Unpublished C (bases 1 to 1828) AUTHORS Direct Submission JOURNAL Submitted (18-NOV-2003) Genoscope - Centre National de Sequencage: BP 191 91006 EVRY cedex - FRANCE (E-mail: seqref@genoscope.cns.fr - Web: www.genoscope.cns.fr) The sequences are based on single pass reads. Life Technologies (a division of Invitrogen) members carried out full-length librairies construction: Temple G. Genoscope members carried out sequencing and annotation: Castelli V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M. URGV INRA: Clepet C., Caboche M. Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein Sequences). 5 prime and 3 prime are assembled with Phrap. http://www.genoscope.cns.fr/externe/sequences/Banque_Projet_EF/Full | CNSOA4MK LOCUS CNSOA4MK CNSOA4MK LOCUS CNSOA4MK CNSOA4MK CNSOA4MK CNSOA4MK CNSOA4MK CNSOA4MK CNSOA4MK CNSOA4MK CNSOA4MK DEFINITION Arabidopsis thaliana Full-length cDNA Complete sequence from clone GSLTPGH24ZE06 of Hormone Treated Callus of strain col-0 of Arabidopsis thaliana (thale cress) CNGCESSION CNSCATOR CRESSION CNSCATOR CNSCATOR CNSCATOR CNSCATOR CNGANISM Arabidopsis thaliana (thale cress) CNGANISM CNSCATOR CNGANISM CNSCATOR CNSCATOR CNSCATOR CNGANISM CNSCATOR CNSCATO | Db 1141 GATCATGTTGTGTGATCAAGTATGTGCCGTATGTTGGAGACAGAGAGGGCAATGGAC 1200  Qy 1201 GAGTACACTTCAGAGATATTCATGGGTGGAAAGAACACCATTGTTTGCACCAACACACTGT 1260  L1201 GAGGATTCCCTTTTAGCTGCTCCTATTATCTTGGACCTTCGTTCTGCACCACCACCTGT 1260  Qy 1261 GAGGACTCACTTCTTAGCTGCTCCTATTATCTTGGACTTGGTCCTTGCTGACCACCCTGT 1220  L1261 GAGGACTCACTTCTTGCCGCCGCCGATCATTCTTGATCTGGTCCTTGCCGAGCTCAGC  Qy 1321 ACTAGAATCCCAGTTTAAAGCTGAAAATGAGGGAAAAATTCCACTCATTCCACCCAGGTTGGT  Db 1321 ACCAGGATTCAGCTGAAAAGAGGGGAAAAATTCCACTCATTCCACCCAGGTTGGT  Qy 1381 ACCATTCTCAGCTAAAAGCCGAGGGGGAAAATTCCACTCATCCACCCAGTTGGT  Qy 1381 ACCATTCTCAGCTTAAAGCTGAAGGGGAAAAATTCCACTCACCCAGCTGGTGAAC 1440  Db 1381 ACCATTCTCAGCTTACCTCAAGGCTCCTTGGTTCCACCCAGTGGTGAAC 1440  Qy 1441 GCATTGTCAAGCCTGCAAGGCTCCTTGTTCCACCCAGTTGGTGAAC 1440  Qy 1441 GCATTGTCAAAGCAGAGGGGAATAACATAATGAGGGCTTGTTTGGATTTGGCC 1500  1501 CCCGAGAACAACATGATTCTCGAGTACAA 1529  Db 1501 CCCGAGAACAACATGATTCTCGAGTACAA 1529 |

 /Clone="to-"Grand or constructed from mRNA isolated from cDNA library was constructed from mRNA isolated from immature cotyledons of greenhouse grown plants (individual seed fresh weight of 100-300mg). The library was prepared using the Life Technologies pSuperScript cDNA library construction kit. Complementary DNA was synthesized from mRNA using a poly(dT) sequence with a synthesized from mRNA using a poly(dT) sequence with a NotI restriction site. SalI linkers adapters were ligated to the blunt-ended cDNA fragments followed by NotI digestion. The cDNA fragments were directionally cloned into the NotI-SalI restriction site of the pSpORT1 vector. The ligated cDNA fragments were transformed into the NotI-SalI restriction site of the pSpORT1 vector. The ligated cDNA fragments were transformed into the Lila volkin and Dr. Anu Khanna. Note that Gm-r1030 is a re-rack of Gm-c1007."

Solanum tuberosum (potato)

Solanum tuberosum (potato)

Solanum tuberosum

Bukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta;

Buemacophyta; Magnollophyta; eudicotyledons; core eudicots;

Spermacophyta; Magnollophyta; eudicotyledons; core eudicots;

Spermacophyta; Magnollophyta; eudicotyledons; core eudicots;

Buetrids; lamiids; Solanales; Solanaceae; Solanum.

1 (bases 1 to 938)

Buell, C.R., Hart, A., Zismann, V., Karamycheva, S.A. and Baker, B.

Generation of ESTs from abiotic stressed potato tissue

Unpublished (2003)
 EST725142 potato abiotic stress cDNA library Solanum tuberosum cDNA clone POAE989 5' end, mRNA sequence.

 four separate sets of plants. Set 1 involved saturation of the soil with 150 mM NaCl and tissues were harvested at following application of the salt stress (leaves: 2hr, 6hr, 12hr, 1d, 2d, and 4d; roots:2hr, 6hr, 12hr, and 2d). Set 2 were grown under the standard conditions and then were water stressed by withdrawal of further watering applications. Drought stressed plants were harvested after cessation of watering (leaves: 3d, 5d, and 7d; roots:3d and 5d). Set 3 were grown under the standard conditions and then were cold stressed by placement at 4 C. Cold stressed leaves were harvested at 2 hr, 6 hr, 12 hr, 1 d, and 4d and roots were harvested at 2 hr, 6 hr, 12 hr, 1 d, and 4d and heat-stressed by placement at 35 C. Heat stressed leaves were harvested at 2 hr, 6 hr, 12 hr, 1 d, and 4d and heat-stressed roots were harvested at 2 hr, 6 hr, 12 hr, 1 d, and 4d
 /note=TVector: pCMVSport6.1; Site 1: EcoRI; Site 2: NotI; supplier: Solanum tuberosum var. Kennebec plants were grown from cuttings on a 16hr light/8 hr dark cycle at 25 C for 3-4 weeks. Abiotic stress conditions were applied to

//notes-"Vector: pBluescript II SK+; Site 1: ECORI; Site 2:
//notes-"Vector: pBluescript was constructed from mRNA isolated
from 2 week old etiolated whole seedlings of p1468916.
Complementary DNA was synthesized from mRNA using a primer
consisting of a poly(dT) sequence with a XhoI restriction
site. ECORI adapters were ligated to the blunt-ended cDNA
fragments followed by XhoI digestion. The cDNA fragments
were directionally cloned into the ECORI- XhoI restriction
site of the pBluescript vector. The ligated cDNA fragments
were transformed into DH10B host cells (Gibco BRL). This
library was constructed in the laboratory of Dr. Randy
Shoemaker at Iowa state university."

```
CC The invention relates to a nucleic acid fragment encoding a soybean myo-
CC inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate
CC synthase having a decreased capacity for the synthesis of myo-inositol 1-
CC phosphate. The invention also relates to a chimeric gene operably linked
CC suitable regulatory sequences, where expression of the chimeric gene
CC results in a decrease in expression of an endogenous or native gene
CC comprising the chimeric gene, a method of making the soybean plant
CC seed of the soybean plant, a soy protein product derived from the
CC processing of soybean seeds, a method of making the soybean plant, a
CC grotein product and a method of using a soybean plant becomes one gene encoding a mutant myo-inositol 1-phosphate synthase having
CC decreased capacity for the synthesis of myo-inositol 1-phosphate. The
CC mucleic acid fragment and methods are useful for producing plants with
CC decreased raffinose, stachyose and phyric acid content and increased
CC sucrose and inorganic phosphate content, leading to valuable and useful
CC soybean products. This sequence represents cDNA encoding a mutant soybean
CC myo-inositol 1-phosphate synthase polypeptide of the invention.
 New nucleic acid fragment encoding myo-inositol 1-phosphate synthase, useful for producing plants with decreased raffinose, stachyose, and phytic acid and increased sucrose, leading to valuable and useful soybean products.

Soybean myo-inositol 1-phosphate synthase cDNA mutant

```
CC nucleic acid encoding soybean myo-inositol 1-phosphate synthase, its complement, subfragment or the complement of the subfragment, operably clinked to suitable regulatory sequences, where expression of the chimeric gene results in a decrease in expression of an endogenous or native gene coding a soybean myo-inositol 1-phosphate synthase), a soybean plant comprising the chimeric gene (with a heritable phenotype of a seed phytic acid content of less than 17 micromol/g, a seed content of raffinose plus comprising the chimeric gene (with a heritable phenotype content of greater than 200 micromol/g, provided that the plant is not LR33), seeds from the plant, making a soybean plant with the heritable phenotype (comprising crossing LR33 or the plant comprising the chimeric gene with an elite soybean plant and selecting a progeny plant of the cross of crossing step that has a heritable phenotype as mentioned above), seeds of soybean plant made by the above method, a soy protein product derived from seeds of a soybean plant (homozygous for one or more gene encoding a mutant myo-inositol 1-phosphate synthase having decreased capacity for the acres of more product and soft of the conference of more products and conference of more prod
 the synthesis of myo-inositol 1-phosphate, where the gene confers a heritable phenotype as mentioned above), and making or producing a soybean protein product derived from seeds of a soybean plant with heritable phenotype as mentioned above. The nucleic acid is useful for altering raffinose saccharide, sucrose, phytic acid and inorganic phosphate content of soybean seeds thus leading to valuable and useful soybean products, since the presence of high concentration of raffinose oligosaccharides in soy plants (and other legumes) can lead to flatulence when consumed by humans. The present sequence encodes a mutant myo-
 The invention relates to an isolated nucleic acid fragment encoding a soybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-phosphate synthase having decreasing capacity for the synthesis for myo-inositol-1-phosphate. Also included are a chimeric gene (comprising the
 Novel isolated nucleic acid fragment encoding soybean myo-inositol 1-phosphate synthase, useful for altering raffinose saccharide, sucrose, phytic acid and inorganic phosphate content of soybean seeds.

New nucleic acid fragment encoding myo-inositol 1-phosphate synthase, useful for producing plants with decreased raffinose, stachyose, and phytic acid and increased sucrose, leading to valuable and useful soybean products.

The invention relates to a nucleic acid fragment encoding a soybean myoCC inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate
CC synthase having a decreased capacity for the synthesis of myo-inositol 1CC phosphate. The invention also relates to a chimeric gene operably linked
CC to suitable regulatory sequences, where expression of the chimeric gene
CC results in a decrease in expression of an endogenous or native gene
CC comprising the chimeric gene, a method of making the soybean plant of
CC seed of the soybean myo-inositol 1-phosphate synthase, a soybean plant, a
CC seed of the soybean method of making or producing a soy
CC protein product and a method of using a soybean plant homozygous for at
CC least one gene encoding a mutant myo-inositol 1-phosphate synthase having
CC decreased capacity for the synthesis of myo-inositol 1-phosphate. The
CC cucleic acid fragment and methods are useful for producing plants with
CC decreased raffinose, stachyose and phytic acid content and increased
CC sucrose and inorganic phosphate content, leading to valuable and useful
CC soybean products. This sequence represents cDNA encoding a wild type
CC soybean myo-inositol 1-phosphate synthase polypeptide of the invention. having

 The invention relates to an isolated nucleic acid fragment encoding a goybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-phosphate synthase having decreasing capacity for the synthase; its complement, subfragment or the complement of the subfragment or complement, subfragment or the complement of the subfragment, operably complement, subfragment or the complement of the subfragment, operably collinked to suitable regulatory sequences, where expression of the chimeric gene encoding a soybean myo-inositol 1-phosphate synthase), a soybean plant comprising the chimeric gene (with a heritable phenotype of a seed phytic acid content of less than 17 micromol/g, a seed content of raffinose plus stackhyose of less than 17 micromol/g, and a seed content of comprising crossing land selecting a progeny plant is not LR33), seeds from the plant, making a soybean plant with the heritable phenotype (comprising crossing LR33 or the plant comprising the chimeric gene with an elite soybean plant and selecting a progeny plant of the cross of crossing step that has a heritable phenotype as mentioned above), seeds of soybean plant made by the above method, a soy protein product derived from seeds of a soybean plant (homozygous for one or more gene encoding a soybean protein product derived from seeds of a soybean protein product derived from seeds of a soybean plant with heritable phenotype as mentioned above), seeds of contable phenotype as mentioned above. The nucleic acid is useful for altering raffinose saccharide, sucrose, phytic acid and inorganic phosphate synthase, sucrose, phytic acid and inorganic consumed by humans. The presence of high concentration of raffinose oliositol 1-phosphate synthase.

New nucleic acid fragment encoding myo-inositol 1-phosphate synthase, useful for producing plants with decreased raffinose, stachyose, and phytic acid and increased sucrose, leading to valuable and useful soybean

Example 8; SEQ ID NO 9; 48pp; English.

CC The invention relates to a nucleic acid fragment encoding a soybean myoCC inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate
CC synthase having a decreased capacity for the synthesis of myo-inositol 1CC phosphate. The invention also relates to a chimeric gene operably linked
CC to suitable regulatory sequences, where expression of the chimeric gene
CC results in a decrease in expression of an endogenous or native gene
CC encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant
CC seed of the soybean plant, a soy protein product derived from the
CC processing of soybean seeds, a method of making the soybean plant, a
CC seed of the soybean seeds, a method of making the soybean plant, a
CC protein product and a method of using a soybean plant homozygous for at
CC least one gene encoding a mutant myo-inositol 1-phosphate synthase having
CC decreased capacity for the synthesis of myo-inositol 1-phosphate. The
CC decreased raffinose, stachyose and phytic acid content and increased
CC sucrose and inorganic phosphate content, leading to valuable and useful
CC soybean products. This sequence represents cDNA encoding a mutant soybean
CC myo-inositol 1-phosphate synthase polypeptide of the invention.

Example 8; SEQ ID NO 9; 34pp; English.

The invention relates to an isolated nucleic acid fragment encoding a composition of the chimeric gene (compilate synthase having decreasing capacity for the synthase, its complement, subfragment or the complement of the subfragment, operably comprising the encoding a soybean myo-inositol 1-phosphate synthase, its comprising a soybean myo-inositol 1-phosphate synthase, its comprising the chimeric gene (with a heritable phenotype of the chimeric comprising the chimeric gene (with a heritable phenotype of a seed phytic acid content of less than 17 micromol/g, a seed content of raffinose plus stachyose of less than 17 micromol/g, and a seed sucrose content of comprising crossing LR33 or the plant the heritable phenotype (comprising crossing LR3) or the plant comprising the chimeric gene with an elite soybean plant and selecting a progeny plant of the cross of crom seeds of a soybean plant (homozygous for one or more gene encoding a mutant myo-inositol 1-phosphate synthase having decreased capacity for the synthesis of myo-inositol 1-phosphate where the gene confers a complement product derived from seeds of a soybean plant with heritable phenotype as mentioned above), seeds of the synthesis of myo-inositol 1-phosphate where the gene confers a complement of soybean plant with heritable phenotype as mentioned above), seeds of a soybean plant with heritable phenotype as mentioned above. The nucleic acid is useful for altering raffinose saccharide, sucrose, phytic acid and inorganic phenocype as mentioned above. The nucleic acid is useful compositol 1-phosphate synthase, having decreased capacity for the synthase.

ADQ14490
 The invention relates to a nucleic acid fragment encoding a soybean myo-
CC inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate
CC synthase having a decreased capacity for the synthesis of myo-inositol 1-
CC phosphate. The invention also relates to a chimeric gene operably linked
CC to suitable regulatory sequences, where expression of the chimeric gene
CC results in a decrease in expression of an endogenous or native gene
CC encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant
CC comprising the chimeric gene, a method of making the soybean plant a
CC seed of the soybean plant, a soy protein product derived from the
CC protein product and a method of using a soybean plant homozygous for at
CC least one gene encoding a mutant myo-inositol 1-phosphate synthase having
CC concleic acid fragment and methods are useful for producing plants with
CC decreased capacity for the synthesis of myo-inositol 1-phosphate. The
CC decreased raffinose, stachyose and phytic acid content and increased
CC sucrose and inorganic phosphate content, leading to valuable and useful
CC soybean products. This sequence represents cDNA encoding a wild type
CC soybean myo-inositol 1-phosphate synthase polypeptide of the invention.
 New nucleic acid fragment encoding myo-inositol 1-phosphate synthase, useful for producing plants with decreased raffinose, stachyose, and phytic acid and increased sucrose, leading to valuable and useful soybean

 This is the nucleotide sequence of cDNA encoding the wild-type soybean cc (MTC 97970). The clone was isolated from a cDNA library of soybean line CC (ARIS by hybridisation to a probe made from MI 1-PS cDNA of Arabidopsis CC thaliana. MI 1-PS is involved in glucose metabolism to phytic acid, CC raffinose and stachyose. A mutant MI 1-PS nucleic acid (see AAV62443) has been identified in soybean line LR33, a mutagenised line of low raffinose CC saccharide phenotype. Sequencing revealed a single base change mutation CC (G to T at base 1241) in the LR33 sequence. The mutation results in a CC seed phenotype of very low raffinose saccharide sugars, very high sucrose and low phytic acid. The nucleic acid is used to alter the raffinose CC soybean seeds, leading to useful soybean products, e.g. a seed phytic acid content of less than 17 ug/g, a seed content of raffinose and CC stachyose combined of less than 14.5 ug/g, and a seed sucrose content CC greater than 200 ug/g. (Updated on 17-OCT-2003 to standardise OS field)

The invention relates to a nucleic acid fragment encoding a soybean myoCC inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate
CC synthase having a decreased capacity for the synthesis of myo-inositol 1CC phosphate. The invention also relates to a chimeric gene operably linked
CC to suitable regulatory sequences, where expression of the chimeric gene
CC results in a decrease in expression of an endogenous or native gene
CC encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant
CC comprising the chimeric gene, a method of making the soybean plant, a
CC seed of the soybean myo-inositol 1 phosphate synthase for at
CC processing of soybean seeds, a method of making or producing a soy
CC protein product and a method of using a soybean plant homozygous for at
C1 least one gene encoding a mutant myo-inositol 1-phosphate synthase having
CC decreased capacity for the synthesis of myo-inositol 1-phosphate. The
CC nucleic acid fragment and methods are useful for producing plants with
CC decreased raffinose, stachyose and phytic acid content and increased Claim 10; SEQ ä ĕ 5; 48pp; English. useful soybean

 Run on:
 OM nucleic - nucleic search, using sw model
 Total number of hits satisfying chosen parameters:
 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 myo-inositol-1-phosphate synthase.
Nicotiana paniculata
Nicotiana paniculata
Nicotiana paniculata
Eukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta;
Spermatophyta; Magnoliophyta; eudicotyledons; core eudicots;
asterids; lamiids; Solanales; Solanaceae; Nicotiana.
 Submitted (01-SEP-1999) Akiko Hashimoto, Japan Tobacco Inc., Breeding and Genetics Research Laboratory; 700 Higashibara, I Toyoda-cho, Shizuoka 438-0802, Japan (E-mail:Akiko.Hashimoto@pbgrl.jti.co.jp, Tel:+81-538-32-7116, Fax.gl-538.32-714

 software (http://www.tigr.org/software/).
This clone was originally generated by the Public Soybean Project (http://129.186.26.94/soybeanest.html)/Shoemaker,
 Individual base call and confidence value were assigned using phred software (http://www.phrap.org/). Overall sequence qualassessment and vector trimming were conducted using the Lucy
 This clone is available through: Biogenetic Services, 801 32nd Brookings, SD 57006. For further information call 605-697-8500

/note="Vector: pSPORT1; Site 1: SalI; Site 2: NotI; This
cDNA library was constructed from mRNA isolated from
immature cotyledons of greenhouse grown plants
(individual seed fresh weight of 100-300mg). The library
was prepared using the Life Technologies pSuperScript cDNA
library construction kit. Complementary DNA was
synthesized from mRNA using a poly(dT) sequence with a
NotI restriction site. SalI linkers adapters were ligated
to the blunt-ended cDNA fragments followed by NotI
digestion. The cDNA fragments were directionally cloned
into the NotI-SalI restriction site of the pSPORT1
vector. The ligated cDNA fragments were transformed into
E. coli ElectroMax DH10B host cells. This library was
constructed by Dr. Lila Vodkin and Dr. Anu Khanna. Note
that Gm-r1030 is a re-rack of Gm-c1007."

 ewin,
 (bases 1 to 754)
 plants of Williams); and 3055 sequences from library Gm-c1028 (from 'Supernod' plants whose seedlings were innoculated with Bradyrhizobium japonicum, courtesy of Dr. Gary Stacey). The 5' ESTs of the source clones from the different progenitor libraries was used to select singletons, or a representative of each contig, which were reracked to form library Gm-r1083. The CDNA clones of the reracked Gm-r1083 library were then sequenced at the 3' end. The contig analysis to select unique genes was performed by the laboratory of Ernest Retzel, Center for Computational Genomics and Bioinformatics, University of Minnesota, http://wwb.ahc.umn.edu/biodata/nsfsoy/.
Reracking was performed by Incyte Genomics, St. Louis, http://www.incyte.com, and 3' sequencing by the Keck Center for Comparative and Functional Genomics, University of Illinois, http://www.lie.uiuc.edu/biotech/keck.html. Note: The corresponding 5' EST from each clone in the Gm-r1083 library is listed in the 'OTHER EST' field. The detailed information on the source library for each clone can also be obtained by referring to the Incyte Genomics clone ID of the original CDNA library that is also listed under 'OTHER EST'."

 cDNAs were made by oligo-dT priming and directionally cloned. 5'and 3' adaptors were used in cloning as follows: 5'-AAGCAGTAGTATCAACGCAGAGTGGCCATTACGCCGGG-3' and 5'-AATTCTAGAGGCCGAGCGCGACATG-dT(30)NN-3'. Library was constructed using the Clontech Creator SMART kit and size-selected to contain the 0.5-3 kb size fraction."

4; SEQ ID ö 1; 48pp; English

results in a decrease in expression of an endogenous or native gene encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant comprising the chimeric gene, a method of making the soybean plant, a seed of the soybean plant, a soy protein product derived from the processing of soybean seeds, a method of making or producing a soy processing of soybean seeds, a method of making or producing a soy protein product and a method of using a soybean plant homozygous for at least one gene encoding a mutant myo-inositol 1-phosphate synthase having decreased capacity for the synthasis of myo-inositol 1-phosphate. The nucleic acid fragment and methods are useful for producing plants with decreased raffinose, stachyose and phytic acid content and increased sucrose and inorganic phosphate content, leading to valuable and useful soybean products. This sequence represents cDNA encoding a wild type soybean myo-inositol 1-phosphate synthase polypeptide of the invention. The invention relates to a nucleic acid fragment encoding a soybean myo-inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate synthase having a decreased capacity for the synthesis of myo-inositol 1-phosphate. The invention also relates to a chimeric gene operably linked to suitable regulatory sequences, where expression of the chimeric gene

 CC This is the nucleotide sequence of cDNA encoding the wild-type soybean CC myo-inosicol 1-phosphate synthase (MI 1-PS) present in clone p5bmi-lps CC (ATCC 97970). The clone was isolated from a cDNA library of soybean line CC LR13 by hybridisation to a probe made from MI 1-PS cDNA of Arabidopsis CC thaliana. MI 1-PS is involved in glucose metabolism to phytic acid, CC raffinose and stachyose. A mutant MI 1-PS nucleic acid (see AN62443) has been identified in soybean line LR33, a mutagenised line of low raffinose CC saccharide phenotype. Sequencing revealed a single base change mutation CC (G to T at base 1241) in the LR33 sequence. The mutation results in a CC seed phenotype of very low raffinose saccharide sugars, very high sucrose CC and low phytic acid. The nucleic acid is used to alter the raffinose CC saccharide, sucrose, phytic acid and inorganic phosphate content of CC soybean seeds, leading to useful soybean products, e.g. a seed phytic acid content of less than 17 ug/g, a seed content of raffinose and CC stachyose combined of less than 14.5 ug/g, and a seed sucrose content CC greater than 200 ug/g. (Updated on 17-OCT-2003 to standardise OS field)

Novel isolated nucleic acid fragment encoding soybean myo-inositol 1-phosphate synthase, useful for altering raffinose saccharide, sucrose phytic acid and inorganic phosphate content of soybean seeds.

Example 8; SEQ ID NO 9; 34pp; English.

The invention relates to an isolated nucleic acid fragment encoding a cosybban myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-composphate synthase having decreasing capacity for the synthasis for myo-ci inositol-1-phosphate. Also included are a chimeric gene (comprising the complement, subfragment or the complement of the subfragment, operably complement, subfragment or the complement of the subfragment, operably complement, subfragment or the complement of the subfragment, operably comprising the chimeric gene results in a decrease in expression of an endogenous or native gene encoding a soybean myo-inositol 1-phosphate synthase), a soybean plant comprising the chimeric gene (with a heritable phenotype of a seed phytic acid content of less than 17 micromol/g, a seed content of raffinose plus stachyose of less than 14.5 micromol/g, and a seed sucrose content of greater than 200 micromol/g, provided that the plant is not LR33), seeds from the plant, making a soybean plant with the heritable phenotype (comprising trop that has a heritable phenotype as mentioned above), seeds of soybean plant made by the above method, a soy protein product derived from seeds of a soybean plant (homozygous for one or more gene encoding a mutant myo-inositol 1-phosphate synthase having decreased capacity for the synthasis of myo-inositol 1-phosphate, where the gene confers a charitable phenotype as mentioned above), and making or producing a mentiable phenotype as mentioned above).

Best Local :
 soybean protein product derived from seeds of a soybean plant with heritable phenotype as mentioned above. The nucleic acid is useful for altering raffinose saccharide, sucrose, phytic acid and inorganic phosphate content of soybean seeds thus leading to valuable and useful soybean products, since the presence of high concentration of raffinose oligosaccharides in soy plants (and other legumes) can lead to flatulence when consumed by humans. The present sequence encodes a wild-type myo-

ANV6444
ANV
 This is the nucleotide sequence of cDNA encoding a mutant soybean myo-
CC innositol 1-phosphate synthase (MI 1-PS) present in clone LR33-10. This
CC clone was isolated from a cDNA library of soybean line LR33 by PCR
CC amplification (see AAV62441-42). Line LR33 was obtained by chemical
CC mutagenesis of wild-type soybean genome and as a reduced raffinose
CC sacid, raffinose and stachyose. Sequencing revealed a single base change
CC wild-type sequence (see AAV62441) in the LR33 sequence when compared to the
CC wild-type sequence (see AAV62440). The mutation results in a seed
CC whenotype of very low raffinose saccharide sugars, very high sucrose and
CC low phytic acid. The mutated MI 1-PS nucleic acid is used to alter the
CC raffinose saccharide, sucrose, phytic acid and inorganic phosphate
CC content of soybean seeds, leading to useful soybean products, e.g. a seed
CC phytic acid content of less than 17.5 ug/g, and a seed sucrose content
CC greater than 200 ug/g. (Updated on 17-CCT-2003 to standardise OS field)

CC The invention relates to a nucleic acid fragment encoding a soybean myo-
CC inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate
CC synthase having a decreased capacity for the synthesis of myo-inositol 1-
CC phosphate. The invention also relates to a chimeric gene operably linked
CC to suitable regulatory sequences, where expression of the chimeric gene
CC results in a decrease in expression of an endogenous or native gene
CC encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant a
CC seed of the soybean plant, a soy protein product derived from the
CC processing of soybean seeds, a method of making the soybean plant, a
CC protein product and a method of using a soybean plant homozygous for at
CC least one gene encoding a mutant myo-inositol 1-phosphate synthase having
CC decreased capacity for the synthesis of myo-inositol 1-phosphate. The
CC decreased raffinose, stachyose and phytic acid content and increased
CC sucrose and inorganic phosphate content, leading to valuable and useful
CC soybean products. This sequence represents cDNA encoding a mutant soybean
CC myo-inositol 1-phosphate synthase polypeptide of the invention.
 New nucleic acid fragment encoding myo-inositol 1-phosphate synthase, useful for producing plants with decreased raffinose, stachyose, and phytic acid and increased sucrose, leading to valuable and useful soybean

Novel isolated nucleic acid fragment encoding soybean myo-inositol 1-phosphate synthase, useful for altering raffinose saccharide, sucrose phytic acid and inorganic phosphate content of soybean seeds. sucrose,

Claim 8; SEQ ID NO 5; 34pp; English

The invention relates to an isolated nucleic acid fragment encoding a cybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-phosphate synthase having decreasing capacity for the synthasis for myo-inositol-1-phosphate synthase, its complement, subfragment or the complement of the synthase, its complement, subfragment or the complement of the subfragment, operably collinked to suitable regulatory sequences, where expression of the chimeric comprising the chimeric crossitol 1-phosphate synthase), a sophean plant comprising the chimeric gene (with a heritable phenotype of a seed phytic caid content of less than 17 micromol/g, a seed content of raffinose plus stachyose of less than 17 micromol/g, and a seed sucrose content of comprising crossing LR33 or the plant comprising the chimeric gene with elant, making a soybean plant with the heritable phenotype (comprising step that has a heritable phenotype, as seeds of soybean plant and selecting a progeny plant of the cross of crossing step that has a heritable phenotype as mentioned above), seeds crossing step that has a heritable phenotype as mentioned above, seeds of soybean plant made by the above method, a soy protein product derived from seeds of a soybean plant (homozygous for one or more gene encoding a complement myo-inositol 1-phosphate synthase having decreased capacity for the synthase phenotype as mentioned above), and making or producing a complement product derived from seeds of a soybean plant with heritable phenotype as mentioned above. The nucleic acid is useful for altering raffinose secharide, sucrose, phytic acid and inorganic phosphate content of soybean seeds thus leading to valuable and useful conjugated by humans. The present sequence encodes a mutant myo-inosphate synthase. inositol 1-phosphate synthase

 results in a decrease in expression of an endogenous or native gene encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant comprising the chimeric gene, a method of making the soybean plant, a seed of the soybean plant, a soy protein product derived from the processing of soybean seeds, a method of making or producing a soy protein product and a method of using a soybean plant homozygous for at least one gene encoding a mutant myo-inositol 1-phosphate synthase having decreased capacity for the synthasis of myo-inositol 1-phosphate. The nucleic acid fragment and methods are useful for producing plants with decreased raffinose, stachyose and phytic acid content and increased sucrose and inorganic phosphate content, leading to valuable and useful soybean products. This sequence represents cDNA encoding a wild type soybean myo-inositol 1-phosphate synthase polypeptide of the invention.
 The invention relates to a nucleic acid fragment encoding a soybean myo-inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate synthase acceptable for the synthesis of myo-inositol 1-phosphate. The invention also relates to a chimeric gene operably linked to suitable regulatory sequences, where expression of the chimeric gene
 New nucleic acid fragment encoding myo-inositol 1-phosphate synthase, useful for producing plants with decreased raffinose, stachyose, and phytic acid and increased sucrose, leading to valuable and useful soybean products.

The invention relates to a nucleic acid fragment encoding a soybean myo-
CC inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate
CC synthase having a decreased capacity for the synthesis of myo-inositol 1-
CC phosphate. The invention also relates to a chimeric gene operably linked
CC to suitable regulatory sequences, where expression of the chimeric gene
CC results in a decrease in expression of an endogenous or native gene
CC encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant
CC comprising the chimeric gene, a method of making the soybean plant
CC seed of the soybean plant, a soy protein product derived from the
CC processing of soybean seeds, a method of making or producing a soy
CC protein product and a method of using a soybean plant homozygous for at
CC least one gene encoding a mutant myo-inositol 1-phosphate synthase having
CC decreased capacity for the synthasis of myo-inositol 1-phosphate. The
CC decreased raffinose, stachyose and phytic acid content and increased
CC sucrose and inorganic phosphate content, leading to valuable and useful
CC soybean products. This sequence represents CDNA encoding a mutant soybean
CC myo-inositol 1-phosphate synthase polypeptide of the invention.

phytic acid and inorganic phosphate content of soybean seeds
```

Claim 2; SEQ ID NO 15; 34pp; English.

cc phosphate synthase having decreasing capacity for the synthase, or a mutant myo-inositol-1-phosphate. Also included are a chimeric gene (comprising the complement, subfragment or the complement of the synthase, its complement, subfragment or the complement of the subfragment, operably comprising the chimeric gene results in a decrease in expression of an endogenous or native gene encoding a soybean myo-inositol 1-phosphate synthase), a soybean plant comprising the chimeric gene (with a heritable phenotype of a seed phytic acid content of less than 17 micromol/g, and a seed sucrose content of greater than 200 micromol/g, and a seed sucrose content of comprising crossing than 14.5 micromol/g, and a seed sucrose content of comprising crossing LR33 or the plant with the heritable phenotype (comprising that has a heritable phenotype as mentioned above), seeds of soybean plant and selecting a progeny plant of the cross of corossing step that has a heritable phenotype as mentioned above), seeds of soybean plant made by the above method, a soy protein product derived the synthesis of myo-inositol 1-phosphate, where the gene confers a content myo-inositol 1-phosphate, where the gene confers a content myo-inositol 1-phosphate, where the gene confers a content myo-inositol 1-phosphate, where the gene confers a soybean product derived from seeds of a soybean plant with heritable phenotype as mentioned above. The nucleic acid is useful for altering raffinose saccharide, sucrose, phytic acid and inorganic content of soybean seeds thus leading to valuable and useful soybean plants of soybean plants (and other legumes) can lead to flatulence when consumed by humans. The present sequence encodes a wild-type myo-inositol 1-phosphate synthase. The invention relates to an isolated nucleic acid fragment encoding soybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol phosphate synthase having decreasing capacity for the synthesis for inositol 1-phosphate synthase.

Novel isolated nucleic acid fragment encoding soybean myo-inositol 1-phosphate synthase, useful for altering raffinose saccharide, sucrose, phytic acid and inorganic phosphate content of soybean seeds.

ID NO 13; 34pp; English.

The invention relates to an isolated nucleic acid fragment encoding a goybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-composphate synthase having decreasing capacity for the synthesis for myo-inositol-1-phosphate. Also included are a chimeric gene (comprising the nucleic acid encoding soybean myo-inositol 1-phosphate synthase, its complement, subfragment or the complement of the subfragment, operably complement, subfragment or the complement of the subfragment, operably complement, subfragment or the complement of the subfragment, operably complement, subfragment or the complement of the subfragment, operably complement, subfragment or the complement of the chimeric comprising the chimeric gene (with a heritable phenotype of a seed sucrose content of comprising the chimeric gene (with a heritable phenotype of a seed sucrose content of comprising the plant, making a soybean plant with the heritable phenotype (comprising the plant), provided that the plant is not LR33), seeds (comprising crossing LR33 or the plant with the heritable phenotype with an electing a progeny plant of the cross of crossing step that has a heritable phenotype as mentioned above method, a soy protein product derived from seeds of a soybean plant and selecting a progeny plant of the cross of soybean plant and selecting a progeny plant of the cross of the synthesis of myo-inositol 1-phosphate synthase having decreased capacity for the synthesis of myo-inositol 1-phosphate synthase having decreased capacity for the synthesis of myo-inositol 1-phosphate synthase having decreased capacity for the synthesis of myo-inositol 1-phosphate synthase having decreased capacity for a soybean plant with (homozygous for one or more gene encoding a soybean plant of myo-inositol 1-phosphate synthase having decreased capacity for a soybean plant of myo-inositol 1-phosphate synthase having decreased capacity for comprising the chimeric gene encoding a soybean plant with high plants of myo-inositol 1-phosphate synthase of a soybean plant

The invention relates to a nucleic acid fragment encoding a soybean myo-
CC inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate
CC synthase having a decreased capacity for the synthesis of myo-inositol 1-
CC phosphate. The invention also relates to a chimeric gene operably linked
CC to suitable regulatory sequences, where expression of the chimeric gene
CC results in a decrease in expression of an endogenous or native gene
CC encoding a soybean myo-inositol 1-phosphate synthase, a sybean plant
CC comprising the chimeric gene, a method of making the soybean plant, a
CC seed of the soybean plant, a soy protein product derived from the
CC processing of soybean seeds, a method of making or producing a soy
CC protein product and a method of using a soybean plant homozygous for at
CC least one gene encoding a mutant myo-inositol 1-phosphate synthase having
CC decreased capacity for the synthesis of myo-inositol 1-phosphate. The
CC cleic acid fragment and methods are useful for producing plants with
CC decreased raffinose, stachyose and phytic acid content and increased
CC sucrose and inorganic phosphate content, leading to valuable and useful
CC soybean products. This sequence represents CDNA encoding a mutant soybean
CC myo-inositol 1-phosphate synthase polypeptide of the invention.

RESULT 14
ADS82001
 The invention relates to an isolated nucleic acid fragment encoding a CC soybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-phosphate synthase having decreasing capacity for the synthesis for myo-cc inositol-1-phosphate. Also included are a chimeric gene (comprising the nucleic acid encoding soybean myo-inositol 1-phosphate synthase, its complement, subfragment or the complement of the subfragment, operably CC linked to suitable regulatory sequences, where expression of the chimeric gene encoding a soybean myo-inositol 1-phosphate synthase), a sypean plant comprising the chimeric gene (with a heritable phenotype of a seed phytic acid content of less than 17 micromol/g, a seed content of raffinose plus stachyose of less than 14.5 micromol/g, as seed sucrose content of greater than 200 micromol/g, and a seed sucrose content of comprising treatment, making a soybean plant with the heritable phenotype (comprising crossing LR33 or the plant comprising the chimeric gene with a elite soybean plant and selecting a progeny plant of the cross of crossing step that has a heritable phenotype as mentioned above, seeds of soybean plant made by the above method, a soy protein product derived from seeds of a soybean plant (homozygous for one or more gene encoding a heritable phenotype as mentioned above), seeds consisted phenotype as mentioned above), and making or producing a soybean process sof meritable phenotype as mentioned above. The nucleic acid is useful for altering raffinose saccharide, sucrose, phytic acid and inorganic compositon of soybean seeds thus leading to valuable and useful
 Novel isolated nucleic acid fragment encoding soybean myo-inositol phosphate synthase, useful for altering raffinose saccharide, sucrephytic acid and inorganic phosphate content of soybean seeds.

Listing first 45 summaries
 Scoring table:
 Total number of hits satisfying chosen parameters:
 No.
 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 Nicotiana paniculata
Eukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta;
Spermatophyta; Magnoliophyta; eudicotyledons; core eudicots;
asterids; lamiids; Solanales; Solanaceae; Nicotiana.

1 (bases 1 to 1931)
Hashimoto, A., Yamada, S. and Komori, T.

Myo-inositol-1-phosphate synthase
Published Only in DataBase (1999)
2 (bases 1 to 1931)
Hashimoto, A., Yamada, S. and Komori, T.

1 (bases 1 to 1931)
Hashimoto, A., Yamada, S. and Komori, T.
 AB032073 1931 bp mRNA linear PLN 08-SEP Nicotiana paniculata NpINPS1 mRNA for myo-inositol-1-phosphate
 Breeding and Genetics Research Laboratory;
Toyoda-cho, Shizuoka 438-0802, Japan
(B-mail:Akiko.Hashimoto@pbgrl.jti.co.jp, Te
 Direct Submission
Submitted (01-SEP-1999) Akiko Hashimoto,
 myo-inositol-1-phosphate synthase. Nicotiana paniculata
 synthase, complete cds.
